Statistical Analysis

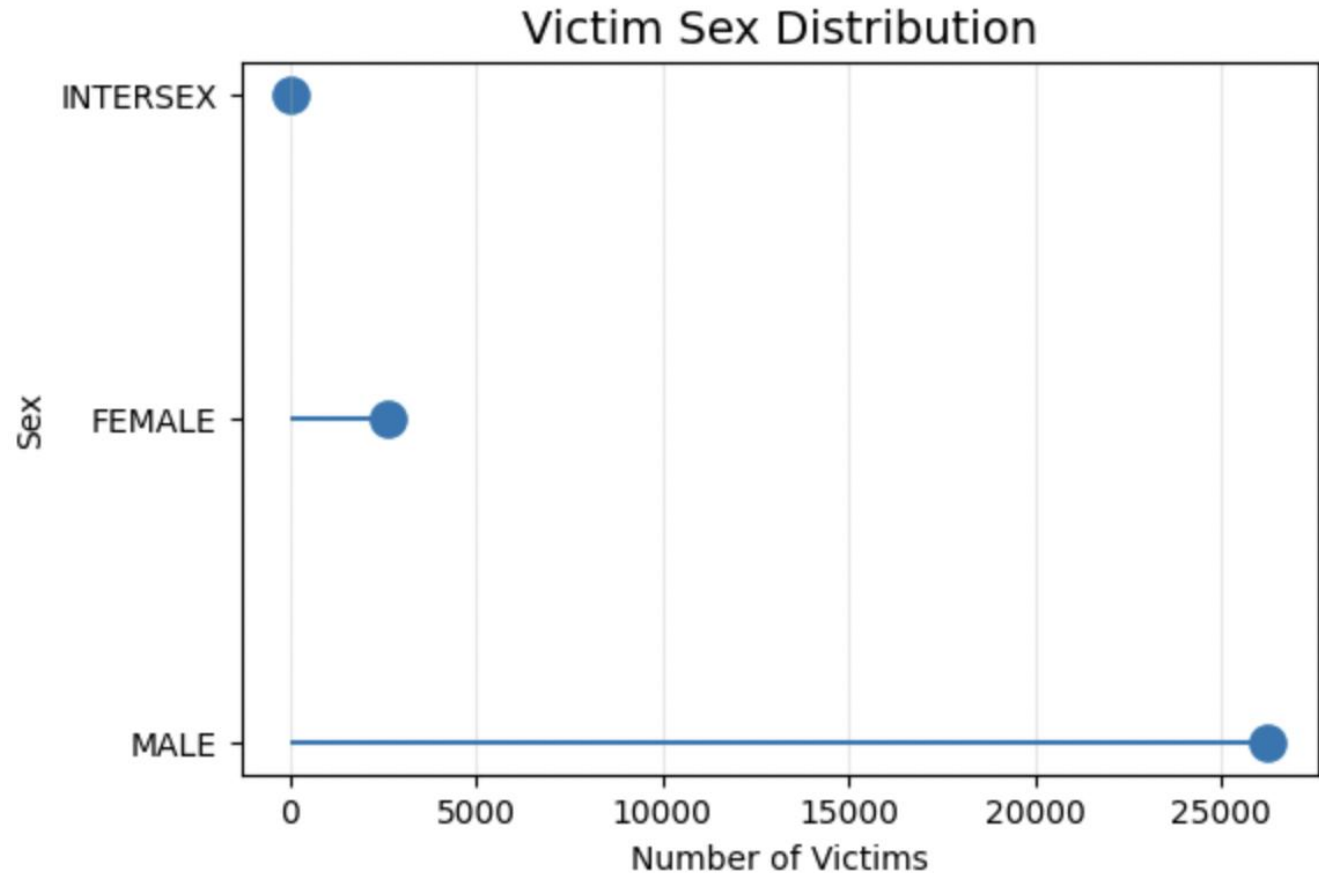

- This chart shows a breakdown of reported shootings by borough. The data indicates Brooklyn and the Bronx reported the highest number of shootings, while Queens, Manhattan, and Staten Island reported lower numbers.

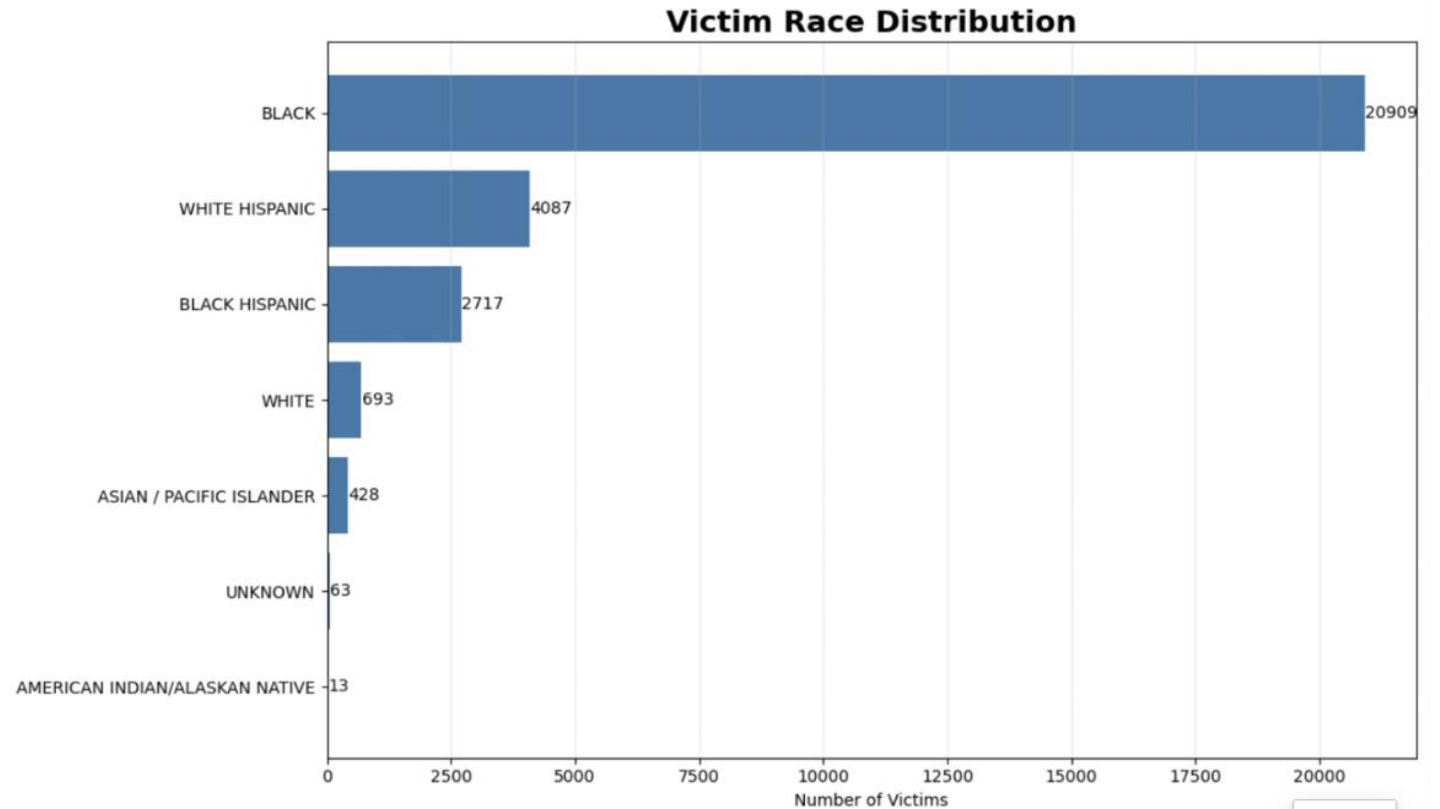

-
- The victim age analysis shows who is most impacted by gun violence. The data indicates the age groups that are most affected by shootings are younger adults (25-44).

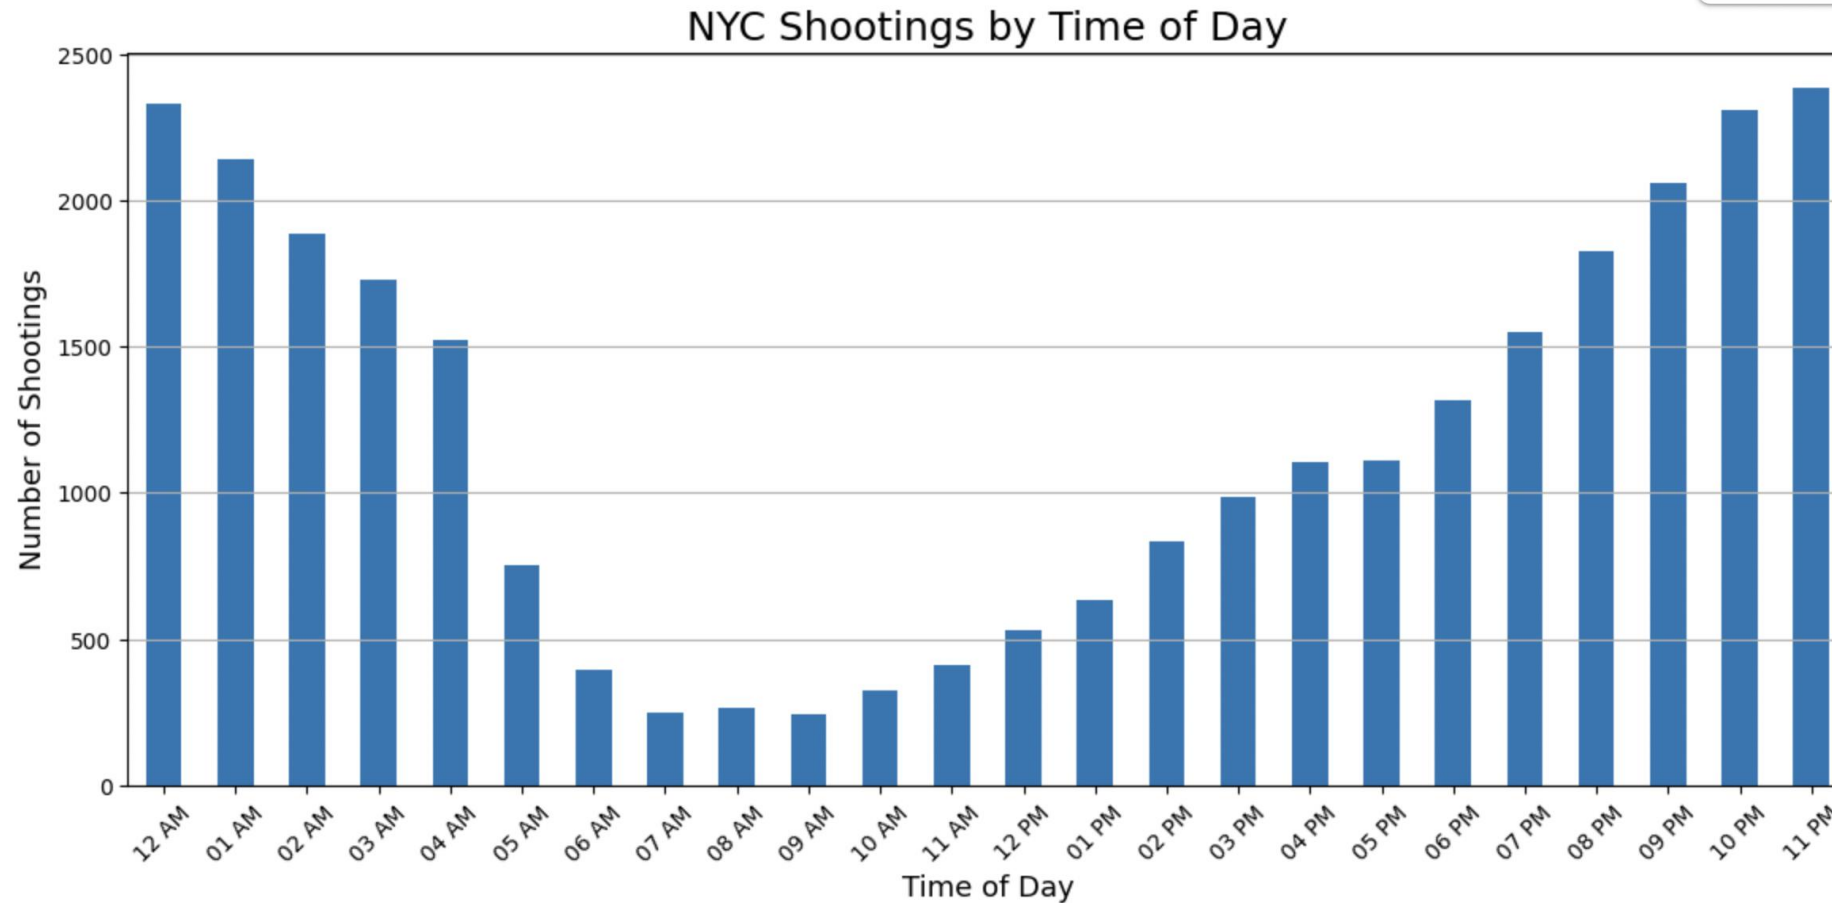

The victim sex distribution shows that males are affected by shootings at a much higher rate than females and intersex individuals.

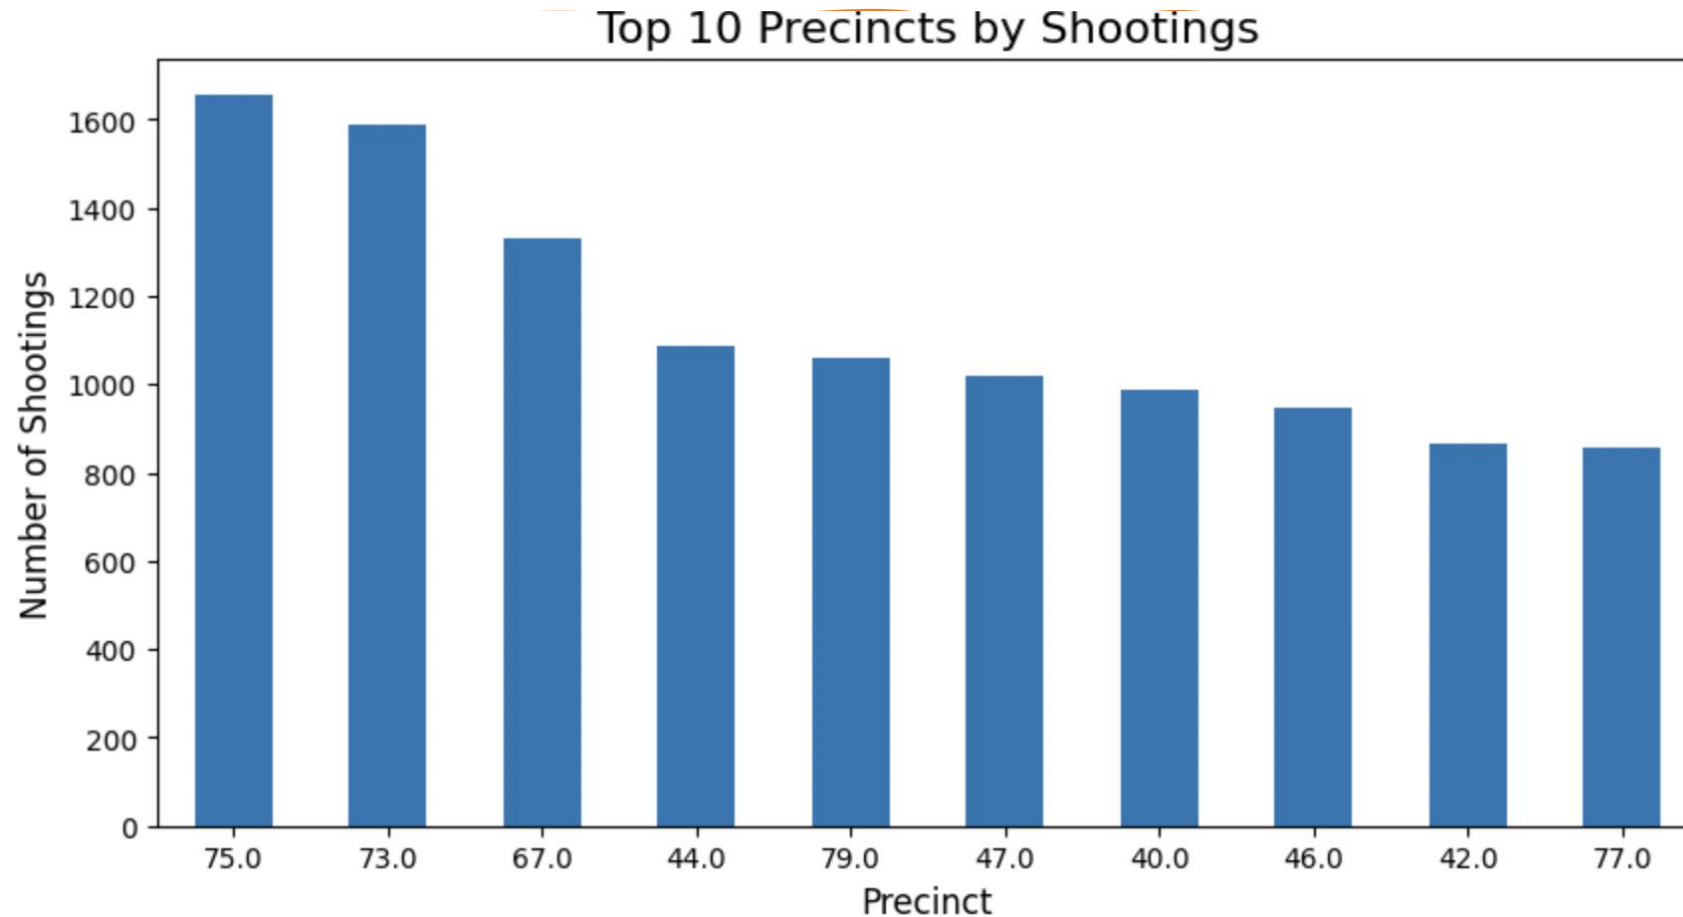

-
- This chart shows the shooting victims by race. Black victims made up the largest number, followed by the Hispanics.
 - The data from this slide and the 2-3 previous slides suggest that there is a need for more community violence intervention programs and support opportunities in Brooklyn and the Bronx. These programs may also want to focus on Black and Hispanic males between the age of 25 and 44.

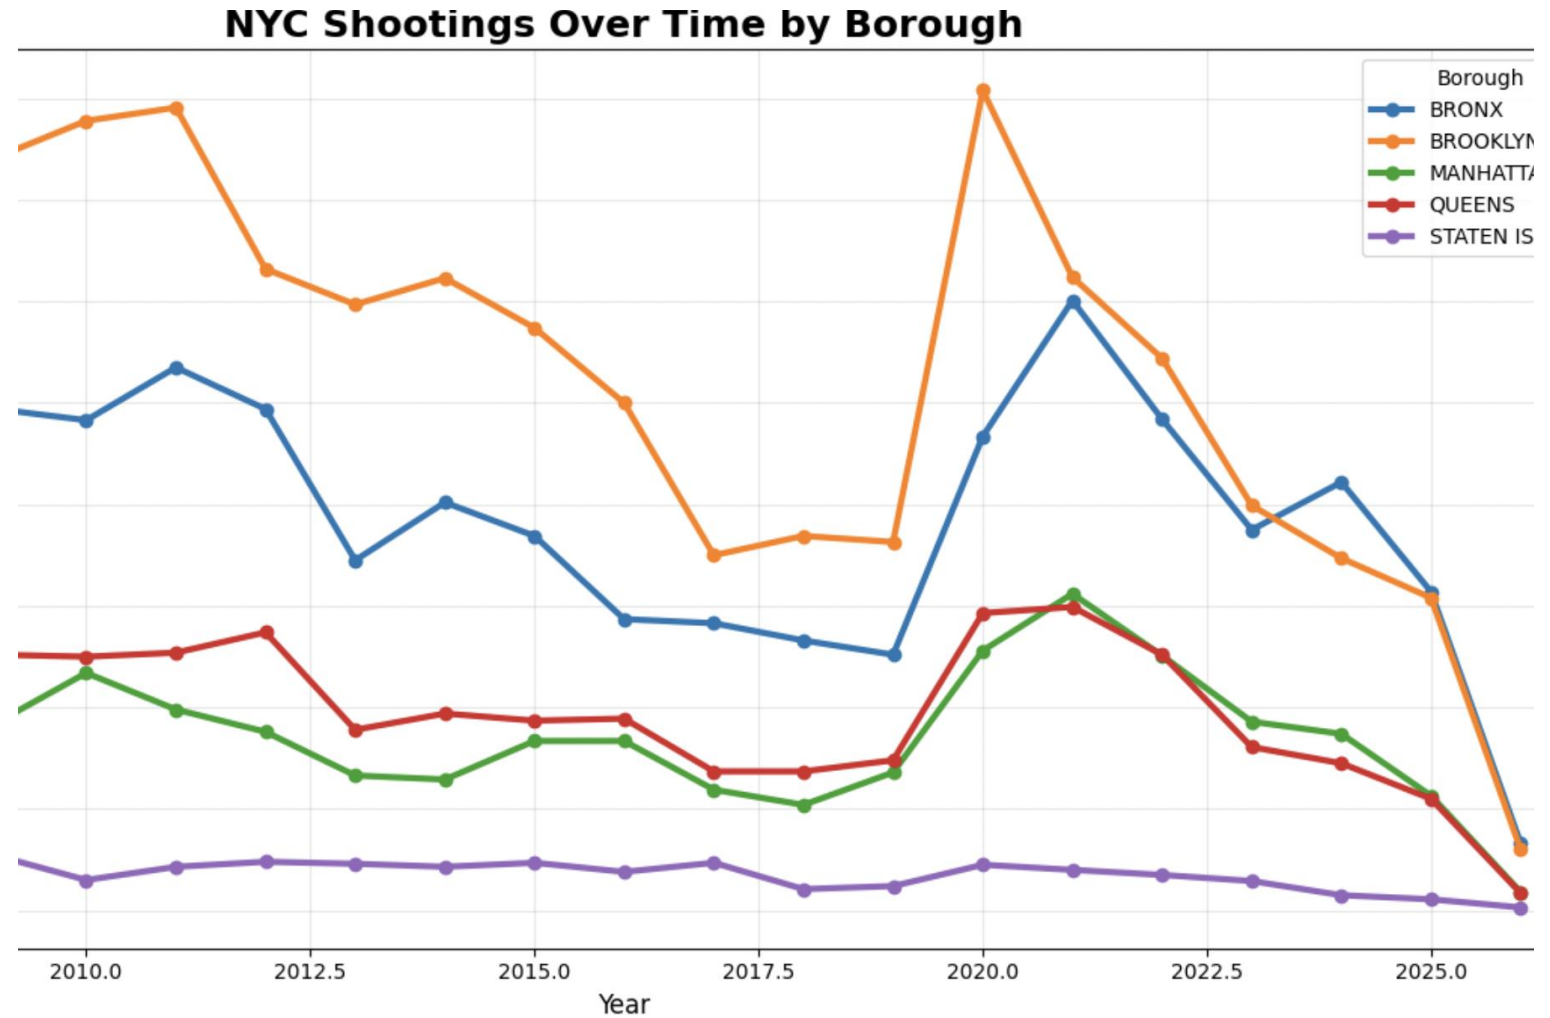

This visualization shows that shootings are more concentrated during evening and nighttime hours, with incidents increasing substantially later in the day. The pattern suggests that time may play an important role in understanding shooting activity across the city.

This graph highlights the precincts with the highest number of shooting incidents. The concentration of incidents within certain precincts may suggest areas where additional public safety resources could be considered.

This chart shows how shootings in New York City changed over time across the five boroughs. Brooklyn and the Bronx consistently had the highest number of shootings, with noticeable spikes in certain years, especially around 2020. Manhattan, Queens, and Staten Island generally stayed lower, with Staten Island having the fewest shootings throughout the entire time-period. Overall, the graph shows while trends rise and fall over time, some boroughs experience significantly more gun violence than others.

Overall this data suggests a need for stronger community violence intervention programs and support services focused on Black and Hispanic males between the ages of 24–44 in Brooklyn and the Bronx. In addition, there needs to be increased patrols and prevention efforts during evening and nighttime hours when incidents are more likely to occur.
